

# Stibo DX CVI toolbox

**Stibo DX**

February 2020

**This toolbox  
shows the basic  
elements of the  
Stibo DX identity**

**Examples of use  
– do's and don'ts**

# Logos

# 01

# Primary logo

**This logo in dark blue is the primary logo to be used.**

Logo variants – dynamic:  
The Stibo DX toolbox comes with a dynamic, animated logo as well. Use this in presentations and online to create more awareness.

# Secondary logo

**The “DX” of the logotype is freely to be used e.g. as a profile picture for LinkedIn or as a watermark in presentations (see the graphic elements section in this document)**

Logo variants - dynamic:  
The Stibo DX toolbox comes with a dynamic, animated secondary logo as well.  
Use in presentations and online to create more awareness.

Logo variants

DX logo in turquoise and blue.

Logo variants

DX logo in both positive and negative colours.

Logo space

A minimum of space around the logo must be maintained.

Distance to other visual elements, text and graphics ensures legibility and impact of the logotypes.

Do's and dont's

It's important that the appearance of the logotypes remains consistent. The logotypes should not be modified, misinterpreted or altered in any way.

The turquoise logo should only be used on the blue background. Otherwise use the primary blue logo.

Stibo DX

Don't twist and twirl

Don't enlarge part of the logotype

Don't use the turquoise logo if the background is not Stibo DX blue.

Don't use the logo in outlines

**The colours**

02

# Primary colours

The dark blue is the main colour of the identity. It is the solid, stable and serious part of Stibo DX.

The turquoise colour represents the innovative, playful part of Stibo DX.

Note:  
For the best result in print material use the specific Pantone colour print if possible.  
Regular CMYK colour print will appear slightly more flat.

# Secondary colours

The secondary colours can be used to add contrast and accents to layouts and designs.

They should always be used in a combination with the primary colours. The primary colours should always be more prominent.

The secondary colours are based on the previous CUE color palette, adding a digital (RGB) twist.

# Colours - Best practice

## Graphs and visuals

Different tints of the primary colours is preferable. This ensures a consistency across designs.

The secondary colours can be applied when additional contrast and accents are needed.

The primary colours should always be more prominent.

Tints of primary Stibo DX blue

Stibo DX blue and Stibo turquoise with secondary colour contrast

## Rare events

In the rare event of a design that must differentiate from the primary Stibo DX look and feel, the combinations of the secondary colours to the right can be used.

Secondary colour combinations for rare events

# Stibo DX Dark Blue

In some of our graphic elements we use a darker, toned down blue colour against the Stibo DX blue.

Stibo DX Dark blue

Cmyk (100, 95, 05, 55)  
RGB (17, 23, 80)  
# 111750

**Typography**

**03**

The typeface of Stibo DX is Montserrat. A timeless grotesque font optimised for digital use and application.

The font files can be found in the Stibo DX CVI toolbox folder, or via Google Fonts.
